Ashtakavarga

Ashtakavarga is a unique method used to know the strength of each house based on the positions of the Ascendant, Sun, Moon, Mars, Venus & Mercury. Astakavarga method divides each Rashi house into subdivisions based on the position of Ascendant & 7 planets. Rahu & Ketu are omitted in calculations as these are not real planets instead they are the nodes of the Moon which are formed during its orbit in the ecliptic plane

	1(Ca)	2(Aq)	3(Pi)	4(Ar)	5(Ta)	6(Ge)	7(Ca)	8(Le)	9(Vi)	10(Li)	11(Sc)	12(Sa)

TOTAL	22	31	31	27	23	29	26	37	22	27	30	32

The common rules that are taught for Ashtakavarga are: Below 25 is weak, 25 to 28 is average, above 28 is good, when planets transit a house about 30 points they bring about positive results, if planets transit a house with below 25 points results may not be good. Please note this is, in general, whereas the predictions may vary depending on various other qualifiers that your astrologer able to analyze better.

Shadbala

Shadbala is a mathematical model to quantify the strength attained from 6 different sources 1) Sthanabala/Positional Strength 2) Dikbala/Directional Strength 3) Kalabala/Temporal Strength 4) Chestabala/Motional Strength 5) Naisargabala/Natural Strength 6) Drgbala/Aspectual Strenght. Parasara in BPHS calls the Shad Bala “Spashta Bala” which means distinct strength. This gives light to the fact that each strength should be evaluated individually and that the sum total of the “Shad Bala” of the planets is less important than each distinct strength on its own

BPHS 27.34-36: Minimum Prescribed Strength: Guru, Budha, and Sūrya are strong, if each of their Sthanabala, Dikbala, Kalabala, Cheshtabala, and Ayanabala are, respectively, 165, 35, 50, 112 and 30 Virupas. The same required for Chandra and Śukra are 133, 50, 30, 100, and 40. For Mangal and Shani, these are 96, 30, 40, 67 and 20.bala

BPHS 27.32-33: Minimum Shadbala Requirement: 390, 360, 300, 420, 390, 330, and 300 Virupas are the Shadbala Pindas, needed for Sūrya, etc. to be considered strong. If the strength exceeds the above-mentioned values, the Graha is deemed to be very strong. If a Graha has the required Shadbala, it proves favorable to the native by virtue of its strength. However, Śani's extreme strength gives long life as well as miseries.

Trine(Δ)

Jupiter Trine Venus This fortunate aspect increases your ability to attract attention, to make money, and to choose the right mate. Jupiter Trine Sun This aspect brings health, success, a pleasing and positive approach to life, and a generous nature. Possible downside: You may have a tendency to kick back and be lazy

Sextile(✳)

Moon Sextile Jupiter You're highly responsive, gentle, and supportive: a genuine human being.. Mars Sextile Jupiter Setting big goals comes naturally to you. You're adventurous, untiring, optimistic, and stalwart – a great combination.. Saturn Sextile Jupiter You're sensible, cool-headed, and practical enough to recognize your limitations and to compensate with your strengths. Saturn lends you the ability to turn your most extravagant Jupiter-driven dreams into Saturnian on-the-ground realities. You can make it happen. The best therapists I know have this aspect

Conjunction(♌)

Venus Conjunction Sun You're appealing, affectionate, and creative. You have a deep need to be in relationships, an innate capacity for intimacy, and a love of pleasure. This aspect also brings artistic talent. Mars Conjunction Moon You're emotionally intense, impatient, and quick to anger. You let people know how you feel, and you aren't always diplomatic about it. Saturn Conjunction Mars At its best, this aspect brings self-discipline, endurance, and courage. At its worst, it leads to shyness, inhibition, resentment, and destructive behavior

Opposition(♌♍)

Venus Opposition Moon Your love affairs travel a bumpy road of conflict and emotional frustration. Some people react by withdrawing, others by becoming demanding and possessive. Either way, you can't help feeling that you have to work harder than other people to get what you want. Venus Opposition Mars You aren't sure what you want, especially in romantic relationships. As a result, your love life may be troubled by arguments, unhappiness, and tension. Venus Opposition Saturn Romance can be a struggle. Defensive and afraid of rejection, you may hide behind a wall of your own creation. Even when you find a fulfilling relationship (and plenty of people with this aspect are happily married), you may feel isolated and may attempt to fill that void by taking on additional responsibilities. Something similar happens with money. In both cases, fear of loss is a motivating factor. Sun Opposition Moon you were born under a full moon, a time when emotions run high. Restless and conflicted, you find it difficult to match your desires to your abilities. You attract stressful relationships and may overreact to obstacles. Although a few people with Sun/Moon oppositions screw up in astonishing ways (extreme example: Michael Jackson), the opposition also motivates them to conquer the internal divide and become hugely successful. Sun Opposition Mars Controlling the vitality that flows through you isn't easy. You tend to overdo it, often by being a workaholic. Your temper can get out of control. You can be contentious and accident-prone, and you have a tendency to act rashly. Sun Opposition Saturn If your Sun and Saturn are opposed, external obstacles or enemies may block your path. Ultimately, you have the ability to overcome everything through self-discipline, persistence, and the thing Saturn loves above all else: hard work.

Vimshottari Dasha

The Sanskrit term *dasha* in Hindu astrology is used to indicate planetary periods, The *Dasha Paddhati* (system) of Directional Astrology is unique to the Hindus; it is found nowhere else. There are many kinds of *Dasha* systems, Parashara mentions forty-two of them, but of these only two are in vogue, namely, *Vimshottari* and *Ashtottari*

Vimshottari in Sanskrit stands for the number 120. *Vimshottari Dasha* assumes that the maximum duration of life of an individual human being is 120 years which is the aggregate duration of all nine planetary periods i.e. Ketu 7, Venus 20, Sun 6, Moon 10, Mars 7, Rahu 18, Jupiter 16, Saturn 19 and Mercury 17, in the order of their operation. It is not known when this system was discovered and why the number of years allotted to each varies. The year of the *Vimshottari dasha* is the astronomical solar year of 365.25 days
